SUCCESSFUL SUMMER PLANTING

Of EVERGREENS, TREES and SHRUBS with the
New plastic spray, PLANTCOTE

By digging the plants with a ball of earth and Plantcoting, it is possible to safely transplant trees and shrubs in full leaf, with complete success, thus extending the planting season into June, July and August.

This picture shows Plantcoted material, moved last summer under the toughest drought conditions we have had for years.

IN WINTER

The use of PLANTCOTE does away with unsightly, and costly burlap or wooden protectors. Being colorless, it brings out the natural beauty of the evergreens and leaves them clean! fresh! and bright!

Deciduous Shrubs

FOR FLOWERS, FOLIAGE, BERRIES

Any true lover of nature will find a world of joy and happiness watching the striking and fascinating changes in flowering shrubs throughout the season. They are a delight from the first mild spring day, when the buds begin to swell, until late in autumn, when the leaves are resplendent in their festive colors and brilliant berries.

We are only able here to acquaint the reader with a very small portion of this wealth of beauty. Generous planting of shrubs around the home will repay in beauty and pleasure many times over the small investment required.

SHRUBS B&B (Balled and Burlapped)

Unless otherwise marked "B&B" (Balled and Burlapped), shrubs are dug bare rooted when dormant. Should balling and burlapping be desired on shrubs not marked "B&B," an extra charge will be made at the following rates.

After the regular bare-root digging season is passed, this material must be dug with a ball, and since considerable time, labor and soil are involved, balling and burlapping will be charged at these rates.

Many, many other fine mums.

In a normal season — and we haven't had one for three years — some of these varieties start to bloom in early August; others later in the month; followed by September blooming species.

It is our constant endeavor to keep abreast with the best and earliest blooming chrysanthemums because of early frosts affecting the Korean and late blooming kinds. Continued test work of new varieties enables us to offer our customers what we'd want most in a Mum . . . Hardiness . . . Early and continued flowering . . . Ruggedness of plant growth . . . Planting Directions

BALLED and BURLAPPED MATERIAL:

Dig holes 18" larger than diameter of ball and 6" deeper than the depth of the ball. Save top-soil, discard sub-soil. Mix, at least 3 times, prescribed amounts of assembled fertilizer with saved top-soil or new loam for proper blending. Spade enough of soil-fertilizer mixture into bottom of hole to insure ball being set at original plant depth as indicated by different bark color. Fill in hole around ball half full. Tamp well. Cut strings and burlap flush with filled-in soil. Fill hole with water and allow to soak in. Complete filling hole with mixture, leaving top saucer-shaped to catch moisture. Water weekly.

BARE ROOT MATERIAL:

The diameter of the hole should be dug at least 2 feet larger than root spread, and 12" deeper than depth of roots. Save top-soil, discard sub-soil. Spade enough of soil-fertilizer mixture into bottom of hole to insure plant being set at original depth as indicated by different bark color. Trim broken root ends. Set plant in hole and fill hole half full of mixture, shaking plant up and down several times to work soil around roots. Tamp well. Fill hole with water. After water has soaked in, complete filling in, leaving surface saucer-shaped to catch water. Stake all trees over 2" caliper, using wires run through rubber hose to avoid chafing. Water weekly.
